Paying for Quality

Discussion with the RI Community Hospital Task Force
February 27, 2008

© Affiliated Computer Services, Inc. (ACS) 2007, 2008

Discussion Topics

- Payer role in encouraging quality
- Pay-for-quality incentives
 - P4Q policy decisions
 - Models from other payers
 - Possibilities for Rhode Island

Examples and numbers are presented for purposes of discussion and do not reflect Rhode Island state government policy

Slide 2

For discussion only – does not represent RI state government policy

© Affiliated Computer Services, Inc. (ACS) 2008

Wonderful, Dangerous Places

1.9 Million Nosocomial Infections a Year

- Ventilator-associated pneumonia
- Sepsis
- Urinary tract infection
- Surgical site
- MRSA, CDAD
- IV catheters

Drug Errors

- Allergies
- Interactions
- Dosage errors
- Timing errors

Information Errors

- Handwritten charts
- Verbal orders
- Abbreviations
- Transfers of care
- Poor historians

- Falls
- Pulmonary embolisms
- Stroke
- Wrong-site surgery

Payer Approaches to Hospital Quality

- Better quality => reducing errors AND improving outcomes
- All too often – payers pay more for poor quality
- Not paying for “never events”
 - Hospitals in MA, VT, MN, WA voluntarily not charging patients
 - Reported incidence very rare (0.03% in Washington state)
- Not paying more for potentially preventable complications
 - Now can be identified using present-on-admission indicator
 - Medicare list 10/1/08: pressure ulcers, catheter-assoc. infections
- Pay-for-quality incentive programs
 - PA, AR, Medicare (proposed)

Policy Decisions to Be Made

- What measures?
 - Balance appropriateness and feasibility
- What population to use in measuring performance?
- What population to use in making payments?
- Reward attainment, improvement or both
- Funding – amount and source
- How to put into operation
- Consultation process

Example: 20 Potential Medicare Measures

Heart Attack

Aspirin at arrival
Aspirin at discharge
Drugs—left ventricular sys dys
Adult smoking cessation
Beta blocker at discharge
Fibrinolytic agent within 30 mins.
Cardiac cath within 120 minutes

Patient Satisfaction

H-CAHPS

Heart Failure

Discharge instructions
Drugs for left ventricular sys dys
Smoking cessation

Pneumonia

Pneumococcal vaccination
Blood culture before antibiotic
Smoking cessation
Appropriate antibiotic
Influenza vaccination

Outcomes

30-day AMI mortality
30-day HF mortality

Surgical Care

Prophylactic antibiotic before surgery
Prophylaxis discontinued after surgery

P4Q: WHAT MEASURES

Example:
Arkansas

Medicaid Inpatient Quality Incentive Data for Qualifying Hospitals (SFY 2007)

*Qualifying hospitals are those hospitals that received the bonus payment.
A small number of out-of-state hospitals in neighboring states that treat Arkansas patients are included.

QUALITY MEASURES

*Quality measures are commonly used to improve care for certain medical conditions.

HEART FAILURE MEASURES

- HF-1:** Discharge instructions (Measures whether hospital staff provided clear, accurate care instructions to the patient when he or she was discharged from the hospital)
- HF-2:** Evaluation of left ventricular systolic function (Measures whether hospital staff evaluated how well the left side of the patient's heart was working)
- HF-3:** ACE or ARB for CHF (Measures whether a patient received medication called an ACE inhibitor or angiotensin receptor blocker, which are proven to improve outcomes for heart failure patients)

- HF-4:** Adult smoking cessation advice/counseling (Measures whether a patient received advice and counseling about stopping smoking)

PNEUMONIA MEASURES

- PN-2:** Pneumococcal vaccination given/received (Measures whether a patient has received a pneumonia shot)
- PN-4:** Adult smoking cessation advice/counseling (Measures whether a patient received advice and counseling about stopping smoking)
- PN-5b:** First antibiotic dose within four hours (Measures whether pneumonia patients received an antibiotic within four hours of hospital admission, a common step in improving outcomes)

Slide 7

For d

P4Q: WHAT MEASURES

Example: Pennsylvania Medicaid

Hospitals earn up to 15 points

- 0-2 points for 7-day readmit rates for each of asthma, diabetes, CHF, COPD (relative to statewide average)
- 0-2 points for score on left ventricular function assessment
- 0-2 points for average time to antibiotic for pneumonia patients
- 1 point for use of single medical record
- 1 point for program to reduce pharmacy errors
- 1 point for reporting Leapfrog measures

P4Q: WHAT MEASURES

Example: 17 RI Measures Already Reported

Heart Attack

Aspirin at arrival
Aspirin at discharge
Drugs—left ventricular sys dys
Adult smoking cessation
Beta blocker at discharge
Fibrinolytic agent within 30 mins.
Cardiac cath within 120 minutes

Composite measure

Pneumonia

Pneumococcal vaccination
Blood culture before antibiotic
Appropriate antibiotic
Influenza vaccination

Composite measure

Heart Failure

Discharge instructions
Drugs for left ventricular sys dys
Smoking cessation

Composite measure

Note: Not all measures are reported by all RI hospitals

Potential New Measures in Rhode Island

Recommendation would be to consider future measures for P4Q when they are approved for reporting by the Health Care Quality Steering Committee

Surgical Care

Prophylactic antibiotic before surgery
Prophylaxis discontinued after surgery

Pressure Ulcers

Admission risk assessment
Daily skin assessment
Incidence of pressure ulcers

Safe Practices

Discharge planning
Computerized prescriber order entry

Basis for Measuring Quality & Making Payments

- Quality measures typically based on all-payer population
 - Prevalence of conditions may vary by payer but care usually does not
 - Government interested in the entire population
- Incentives typically paid based on public payer volume (i.e., Medicaid or Medicare)
 - Rewards hospitals for taking more Medicaid/Medicare patients
 - Presumes that larger hospitals usually have higher costs of achieving quality

P4Q: ATTAINMENT OR IMPROVEMENT

Example: Medicare Pneumococcal Vaccination

Threshold = 47% **Benchmark = 87%**
[Median value] [Average of top decile]

Hosp	Measure		Points	Reason	Calculation
	Base Year	Year			
A		46%	0	Below threshold	
B		91%	10	Above benchmark	
C	67%	67%	5	Attain	$(67 - 47) / (87 - 47)$
D	57%	67%	5	Attain	$(67 - 47) / (87 - 47)$
			3	Improve	$(67 - 57) / (87 - 57)$
E	27%	67%	5	Attain	$(67 - 47) / (87 - 47)$
			7	Improve	$(67 - 27) / (87 - 27)$

Hospitals receive the higher of attainment and improvement scores, which are rounded.

P4Q: ATTAINMENT OR IMPROVEMENT

Example: Arkansas Medicaid

- First incentives paid in summer 2007
- Meet either criterion for at least two-thirds of measures
 - Attainment: > 95% or > 75th percentile statewide
 - Improvement: > 25% reduction in missed opportunities
- Achieve validation scores of at least 80%

Slide 14

For discussion only – does not represent RI state government policy

© Affiliated Computer Services, Inc. (ACS) 2008

Example: Pennsylvania Medicaid

Scores affected new funding starting 1/1/06

- 13-15 points => 150% of funding increase
- 9-12 points => 125% of increase
- 6-8 points => Average increase
- 2-5 points => 75% of increase
- 0-1 points => No increase
- Grants up to \$100,000 also available to hospitals that made investments in pharmacy error reduction, single medical record or other approved quality initiatives

Source and Magnitude of Funding

- Medicare: Budget-neutral, 2%-5% at risk
- PA: New money (DSH), \$1 million
- AR: \$3.9 million; up to 5.8% of per diem at risk or \$50/day
 - But only about half of eligible hospitals qualified
- RI: Budget-neutral, 1%-3%?

P4Q POLICY DECISIONS

Policy Decisions to Be Made

	Pennsylvania Medicaid	Arkansas Medicaid	Medicare Proposal	Rhode Is. Example
What measures	Medicaid	Medicare	Medicare	Publicly reported
Population for calculating scores	All patients	All patients	All patients	All patients
Population for paying incentives	Medicaid	Medicaid	Medicare	Medicaid
Reward attainment or improvement	Attainment	Both	Both	Both
Flat amount or by volume	DSH payments	Medicaid volume	Medicare volume	Medicaid volume
Funding amount	\$1 million	Up to 5.8%	2%-5%	1%-3%
Budget neutrality	New money		Budget neutral	Budget neutral

Suggested Next Steps

- Identify group to design the P4Q program
- Consultation process
- Finalization of measures and calculations
- Identify hospitals eligible for incentives
- Validation process
- Payment mechanism (lump sum or per stay)
- Public reporting
- Policy approvals
- Implementation date with or without transition period
